Name:- Pramit Sahoo
Roll no.:- 18601919013

1. Hormone :-

It is a chemical messenger that is released in one tissue and transported in the bloodstream to reach specific cells in other tissues.

4. Role of Octreotide:-

i) Synthetic octapeptide surrogate of somatostatin is 40x more potent in supressing GH secretion and long acting.

ii) It is preffered over somatostatin for acromegaly and secretory diarrhoeas.

3. Pharmacology of Bromocriptine:-

i) Synthetic ergot derivative named 2-bromo-α-ergocryptine, is a potent dopamine agonist

ii) It has greater action on D2 receptor,

iii) It is also a weak α-adrenergic blocker but not oxytocic.

Actions:-

i) Decrease prolactin release from pituitary.

ii) Increase GH release in normal individuals.

iii) Produces nausea and vomitting.

iv) Decreases gastrointestinal motility.
